

CivicPulse AI: The Modern Constituency Help Platform

A simple system equipping local leaders to quickly read, organize, and fix daily public problems.

Spot, Snap, Solve.

Built for: Build with AI - Code for Communities Challenge

The Cost of Analog Constituency Management

1. Scattered Complaints

Citizens submit problems through a confusing mix of channels: WhatsApp messages, paper letters, phone calls, and office visits. Crucial updates get lost in disorganized files.

2. Repeating Letters

Office staff waste days reading letters one-by-one. If 50 people write letters about the same broken pipe, the system fails to recognize it as a single problem spot.

3. No Location Context

Office planners lack objective maps. Fixes are prioritized based on who yells the loudest, not where local citizens are struggling the most.

Moving from Static Noise to Clear Signals

The Problem

Introducing the Unified Command Screen.

CivicPulse AI collects, reads, and displays all public complaints on one secure, unified interface for the office team to manage.

Smart Reading: Instantly reads written text or voice messages to extract the core issue.

Landmark Finder: Automatically converts local landmarks (e.g., 'Gandhi Park') into objective map coordinates.

Repeat Sorter: Intelligently groups multiple reports about the same issue to eliminate duplicate reading.

The CivicPulse Operating Model

SPOT: Easy Grievance Submission

Built to be ultra-clean; usable without special training on any basic mobile phone or computer.

- **Simple Text Entry:** Citizens write in plain English or local language terms.
- **Address Extraction:** Citizens simply type the nearest shop or school, and the system handles the mapping.

NEW PROBLEM FORM

YOUR COMPLAINT:

The drainage pipe near Gandhi School has burst, dirty water is flooding the road...

[Detected Type:
Water & Drainage]

[Urgency Score:
High (3)]

SNAP: The Anatomy of an AI Decision

AI instantly detects the issue type and translates local landmarks into actionable intelligence.

SNAP: The Smart Priority System

[Priority Score] = [Urgency Weight] × [Number of Repeat Reports]

Ensuring public funds are used correctly with an automatic, objective scoring rule

 High Threat (Value = 3) : e.g., open electrical wires, sewage leaks.

 Medium Threat (Value = 2) : e.g., large potholes, dark street lights.

 Low Threat (Value = 1) : e.g., park cleaning, general public works.

Context Note: The 'Repeat Sorter' groups identical reports, increasing the priority score without clogging the inbox.

SOLVE: The Leader's Office View

A safe, private control screen to inspect, prioritize, and coordinate repairs.

Safe Sign-In: Keeps all citizen complaints private and completely secure.

Real-Time List: Complaints populate the list instantly as they are submitted.

Filter Options: Rapid sorting to show only specific categories like "Unresolved Roads" or "High Urgency Issues".

LIVE COMPLAINT BOARD

HIGH URGENCY

Sewage line leaking near School crossing.

MEDIUM URGENCY

Potholes near Sector 4 Market.

SOLVE: Targeted Repair Routing

Pinpoint Problem Areas

-  **Spot Clusters:** Analyzed complaints are mapped automatically. If 30 people report problems around Gandhi Road, that exact spot glows brightly.
-  **Route Planning:** Dispatch municipal maintenance teams directly to exact target locations without guesswork.
-  **Clean Data:** Keeps local budgets laser-focused on verified counts and objective geographical maps.

Distance

27.4km

Arrival time

10:10 PM

 3:10 min

The Complete Complaint Journey

Processing every submission into clear, structured data for the office dashboard.

Our Simple Digital Toolbox

Need	Tool	Impact
Easy Web Page	React + Vite Framework	Loads smoothly even on basic cellular networks.
Smart Reading Brain	Google Gemini API	Accurately reads local complaint styles and groups them cleanly.
Digital File Cabinet	Firebase Cloud Storage	Stores complaints safely online so constituent files never get lost.
Interactive Map Views	Google Maps API	Helps administrative staff pinpoint road and water repairs directly on screen.

A Smarter Future for Local Governance

Empowering local leaders to make our neighborhoods cleaner, safer, and smarter using everyday simple technologies.
